

THE UNIVERSITY OF THE SOUTH PACIFIC SCHOOL OF DISTANCE EDUCATION BACHELOR OF BUSINESS ADMINISTRATION DEGREE PROGRAM

The University of the South Pacific (USP) is a leading institution of higher learning in the Pacific region. The School of Distance Education (SDE) offers a Bachelor of Business Administration (BBA) degree program, designed to provide students with a comprehensive understanding of business management and operations. This program is structured to meet the needs of students who are unable to attend traditional on-campus classes, offering flexibility and convenience. The curriculum covers a wide range of business subjects, including accounting, marketing, human resources, and organizational behavior. Students are encouraged to engage in practical learning experiences, such as internships and case studies, to enhance their skills and knowledge. The program is designed to be completed within a specified timeframe, allowing students to progress at their own pace. The BBA degree is highly valued in the business world, providing graduates with the necessary skills and qualifications to pursue successful careers in various industries.

The BBA program is designed to be completed within a specified timeframe, allowing students to progress at their own pace. The curriculum covers a wide range of business subjects, including accounting, marketing, human resources, and organizational behavior. مراجعة علمية تأثير الصيام في رمضان على مرضى الكبد الدهني غير التهابي

مرض الكبد الدهني غير التهابي (NAFLD) هو اضطراب شائع في الكبد يتميز بتراكم الدهون في خلايا الكبد. يصاحبه في كثير من الأحيان مقاومة للإنسولين ومرض السكري من النوع الثاني. يعتبر الصيام في رمضان فرصة مثالية لدراسة تأثير التغييرات الغذائية والسلوكية على تطور المرض. تهدف هذه المراجعة إلى تحليل الأدلة العلمية حول تأثير الصيام في رمضان على مؤشرات مرض الكبد الدهني غير التهابي، مثل التغيرات في تكوين الجسم، ضغط الدم، استقلاب الجلوكوز، وعلامات الالتهاب.

تشير الدراسات الحديثة إلى أن الصيام في رمضان يمكن أن يؤدي إلى تحسن في مؤشرات مرض الكبد الدهني غير التهابي. فقد لوحظت انخفاضات في كتلة الجسم، ضغط الدم، مستويات الجلوكوز، وعلامات الالتهاب لدى مرضى الكبد الدهني غير التهابي الذين صاموا في رمضان. هذه النتائج تدعم الفرضية القائلة بأن التغييرات الغذائية والسلوكية الناتجة عن الصيام يمكن أن تساعد في تحسين صحة الكبد لدى هؤلاء المرضى.

تتطلب هذه النتائج مزيداً من الأبحاث لتأكيد تأثير الصيام في رمضان على مرضى الكبد الدهني غير التهابي. يجب أن تكون الدراسات المستقبلية أكثر دقة وتتناول تأثيرات الصيام على المدى الطويل، بالإضافة إلى تقييم الآثار الجانبية المحتملة للصيام لدى هذه الفئة من المرضى.

Abstract
Background
Fasting during Ramadan is a religious obligation for Muslims. It is a period of abstinence from food and drink from dawn to sunset. This period is considered a time of spiritual growth and self-discipline. However, fasting may have health implications, particularly for individuals with chronic kidney disease (CKD). The aim of this study was to investigate the effect of Ramadan fasting on the risk of developing urinary stones in individuals with CKD.

Methods
A retrospective cohort study was conducted in Saudi Arabia. The study included 1000 individuals with CKD who were observed during the month of Ramadan. The primary outcome was the incidence of urinary stones. Data were collected from medical records and patient interviews.

Results
The study found that the incidence of urinary stones was significantly higher in individuals with CKD who fasted during Ramadan compared to those who did not fast. The risk of developing urinary stones was increased by 2.5 times in the fasting group. This finding suggests that fasting during Ramadan may increase the risk of urinary stones in individuals with CKD. The mechanism of this increase is not clear, but it may be related to dehydration and increased urinary concentration of solutes.

تأثير الصيام في رمضان على أعراض قصور القلب المزمن

أهداف البحث: دراسة تأثير الصيام في رمضان على أعراض قصور القلب المزمن لدى المرضى الذين يعانون من قصور القلب المزمن.

الدراسة أجريت على 100 مريض يعانون من قصور القلب المزمن، تم تقسيمهم إلى مجموعتين: مجموعة الصيام ومجموعة عدم الصيام. تم تقييم الأعراض السريرية والبيانات المخبرية قبل الصيام وبعده.

النتائج: أظهرت الدراسة أن الصيام في رمضان أدى إلى تحسن ملحوظ في أعراض قصور القلب المزمن لدى المرضى، خاصة في أعراض التعب والضعف.

الدراسة أجريت على 100 مريض يعانون من قصور القلب المزمن، تم تقسيمهم إلى مجموعتين: مجموعة الصيام (50%) ومجموعة عدم الصيام (50%). تم تقييم الأعراض السريرية والبيانات المخبرية قبل الصيام وبعده. أظهرت النتائج أن الصيام أدى إلى تحسن ملحوظ في أعراض قصور القلب المزمن لدى المرضى، خاصة في أعراض التعب والضعف.

Spinal fluid is a clear, colorless liquid that surrounds the brain and spinal cord. It is produced in the choroid plexus of the ventricles in the brain. The spinal fluid is contained within the subarachnoid space, which is bounded by the arachnoid membrane. The spinal fluid is constantly being produced and absorbed, and it plays a crucial role in protecting the brain and spinal cord from injury and infection.

Spinal fluid is also responsible for the transport of nutrients and the removal of waste products from the brain and spinal cord. It acts as a shock absorber, cushioning the brain and spinal cord against the skull and vertebrae. Additionally, it helps to regulate the pH and osmolarity of the brain and spinal cord.

Spinal fluid is produced at a rate of approximately 500 milliliters per day. It is contained within the subarachnoid space, which is a closed system. The spinal fluid is constantly being produced and absorbed, and it plays a crucial role in protecting the brain and spinal cord from injury and infection. The spinal fluid is also responsible for the transport of nutrients and the removal of waste products from the brain and spinal cord. It acts as a shock absorber, cushioning the brain and spinal cord against the skull and vertebrae. Additionally, it helps to regulate the pH and osmolarity of the brain and spinal cord.
